

# Town Centre Tree Planting Proposals, Linlithgow

This set of landscape strategy drawings is intended to set out the proposals by Linlithgow Burgh Trust to install a number of new trees within the Linlithgow High Street area. The intention of the project is to further improve the character of the town centre and to promote a green way of living for the townspeople of Linlithgow, whilst also helping to encourage a sustainable townscape. The introduction of further trees within the street will help to reduce CO2 levels in the town centre, reduce the effects of heat retention, encourage bird and wildlife and generally create a more pleasant atmosphere within the town for social congregation and interaction.

The strategy will look to install trees in opportune locations identified by Linlithgow Burgh Trust across the High street in three broad categories. These are:

- Type A - Planting of New Trees into existing soft landscape beds
- Type B - Planting of New Trees into renovated existing tree pits
- Type C - Planting of New Trees into newly formed tree pits

Example details of how this could be achieved are shown below and the following detailed sheets indicate the locations where these approaches would apply, along with suggested tree species in each location.

In addition, some additional public space proposals around the Vennel area of the high street have been identified by the group and have been integrated into the strategy.

**KEY**

-  Existing Trees
-  Proposed Trees
-  Existing Shrubs
